

# Gemini Stock Analysis Report

---

Okay, I will analyze the provided LTIM.NS report as a seasoned positional equity trader and provide a recommendation based on your specified criteria.

## Step 1: Audit the Data

- **Data Present:**
  - Daily Price Chart (3 Year)
  - Fundamental Analysis (Short-term and Long-term)
  - Relative Strength Analysis (RS Score, RS Ratios, Turnaround Analysis)
  - EMA Crossover Summary and Chart
  - Bollinger Bands Summary and Chart
  - Supertrend Summary and Chart
  - MACD Summary and Chart
  - Volatility Squeeze Summary and Chart
  - RSI-Volume Summary and Chart
- **Data Missing:**
  - Weekly or Monthly Charts: Longer-term trend confirmation could be stronger with this data.
  - Deeper Volume Analysis: Examining volume spikes and patterns more closely would be beneficial.
- **Confidence Level:** Medium. While the report provides a wide array of technical indicators and a view on fundamentals, the absence of longer-term charts (weekly, monthly) and more detailed volume analysis limits the confidence to Medium.

## Step 2: Analyze the Setup

- **Price Structure & Trend:** The 3-year daily chart indicates an overall uptrend. Recent price action shows it's currently near the higher end of its historical range. EMA Crossover is a **strong uptrend**.
- **Momentum:** The Relative Strength analysis suggests a weakening leader, which is a concern. The Supertrend indicates an uptrend with a trigger on 2025-10-10. However, MACD indicates that the Trend is **bearish** although the momentum is **strengthening**.
- **Confluence:** There's mixed confluence. While price action is bullish, the weakening relative strength and bearish MACD introduce uncertainty.

## Step 3: Formulate the Recommendation

Based on the analysis, particularly the *weakening relative strength* and *bearish MACD Trend*, I would **advise against entering a new long position in LTIM.NS at the current time.**

### Conditional Plan (If You are Looking For a Potential Long Setup)

Because the price action is bullish and Supertrend is buy, this stock still has a possibility of being long. However, there is conflicting signal so it's better to wait until there is a confirmation.

- **Condition to Buy:** Close above and hold the 6250 level. We want to make sure the uptrend can be maintained before committing to long position.
- **Entry Price:** INR 6255 (after confirmation)
- **Stop Loss:** INR 5950 (Below Supertrend Value)
- **Take Profit:** INR 6880 (Based on Potential Resistance Level)
