

# Gemini Stock Analysis Report

---

Based on the detailed analysis of the attached report for **Tech Mahindra (TECHM.NS)**, here is the positional trading assessment.

**Note on Data:** The report generated timestamp is **2026-01-03**. I will treat this as "Today" for the purpose of this analysis.

## Step 1: Audit the Data

### • Data Present:

- **Price Structure:** 3-Year Daily Candle charts.
- **Trend Indicators:** Moving Averages (EMA 20, 50, 200), Supertrend, Golden Cross status.
- **Momentum/Volatility:** RSI, MACD, Bollinger Bands, Volatility Squeeze (ATR).
- **Fundamentals:** Multi-year and quarterly growth metrics, Analyst estimates.
- **Relative Strength:** Comparison vs. ^CNXIT (IT Sector).

### • Data Missing:

- **Weekly/Monthly Timeframe Charts:** While the daily chart covers 3 years, specific weekly candle formations would help confirm the long-term trend strength.
- **Order Flow/Delivery Volume:** Specific delivery percentages are not visible, only total volume bars.

• **Confidence Level: High.** The report provides a comprehensive confluence of trend, momentum, and fundamental data sufficient for an intermediate-term positional trade.

---

## Step 2: Analyze the Setup

**1. Trend & Structure (Bullish):** \* **Golden Cross:** A "Golden Cross" (50 EMA crossing above 200 EMA) occurred on **2025-12-22**. This is a statistically significant signal for intermediate-term bullishness. \* **EMA Alignment:** The stock is trading in a "Strong Uptrend" alignment (Price > 20 > 50 > 200). The price is currently testing the 20 EMA (~1591) as support, a classic entry zone in a trending market. \* **Pattern:** The stock has recovered from a low of ~1200 and is forming a high-level consolidation (Bull Flag/Pennant) after reaching ~1670.

**2. Momentum & Volatility (Mixed to Bullish):** \* **RSI:** At **61.10**, the RSI is in the bullish zone (40-80 range) without being overbought. It has reset from higher levels, allowing room for upside. \* **MACD:** The MACD is currently **Bearish** (Histogram negative, line crossed below signal). This indicates the stock is in a short-term consolidation or "cooling off" phase. However, in a strong uptrend, this often marks a "buy the dip" opportunity rather than a reversal. \* **Volatility:** The Bollinger Bands are tightening (squeeze detected), suggesting a potential expansion in price movement is imminent. The price is holding the "Upper Half" of the bands.

**3. Fundamentals & Relative Strength:** \* **Turnaround Story:** While long-term revenue growth is flagged as "No," recent Net Income and EPS are accelerating (Green flags). This suggests margin expansion and operational efficiency-a strong driver for stock price re-rating. \* **Relative Strength:** The stock is classified as an "Emerging Leader" with a 1-month RS > 1, indicating it is currently outperforming its sector benchmark (^CNXIT).

## Step 3: Formulate the Recommendation

**Verdict: YES.**

The setup aligns well with a 1-4 month horizon. The confluence of a recent Golden Cross, improving fundamentals (EPS growth), and the price holding above key moving averages overrides the short-term MACD weakness. The current consolidation offers a favorable risk-reward ratio.

- **Entry Price: INR 1612 - INR 1625**

- *Rationale:* Enter at current market price (CMP). The stock is bouncing off the 20 EMA (~1591). Buying near this dynamic support is ideal.

- **Stop Loss: INR 1540 (Closing Basis)**

- *Rationale:* This places the risk below the 50 EMA (1547) and the Supertrend support (1561). A close below 1540 invalidates the immediate uptrend thesis.
- *Risk:* Approx. 4.5%.

- **Take Profit: INR 1750 - INR 1780**

- *Rationale:* The 3-year chart (Page 2) shows major resistance at the previous cycle highs around 1750.
- *Upside:* Approx. 8.5% - 10.5%.

**Risk Management Note:** The analyst average target is INR 1615 (current levels), suggesting the stock is "fairly valued" by consensus. However, technical momentum often overshoots analyst estimates in the intermediate term. If the price fails to break INR 1650 within 2 weeks, consider tightening the stop loss to breakeven.
